

### COAXIAL

### MP14RE/XF

This loudspeaker is a coaxial and time coherent arrangement of a cone midrange unit and a precoated fabric dome high frequency unit. The cone of the midrange unit acts as a horn loading for the tweeter, and the chassis of the dome unit represents the throat of this horn. Unlike most traditional coaxial loudspeakers, this arrangement has two advantages: The two drive units have identical acoustic centers, and their directivities in the crossover frequency region are practically identical. With a symmetrical woofer arrangement, e.g. one woofer above and one below this unit, it is possible to build coherent loudspeakers with a symmetrical and stable radiation pattern combined with a smooth frequency response. The midrange unit has an injection moulded metal chassis for strength and stability. The polypropylene cone is carefully matched to a high loss rubber surround. The large voice coil diameter (39mm) allows efficient heat transfer for stable voice coil temperature. The high frequency unit has a vacuum formed, precoated fabric dome diaphragm, with its voice coil immersed in magnetic fluid for improved heat transfer and damping. A small, efficient magnet made from neodymium-iron-boron provides the magnetic field.

#### NOTES

Response curve recorded in anechoic chamber (Free-field, 4 pi radiation) with 0.5m microphone distance. The loudspeaker is mounted in a closed box of 7 l net volume.
